Larry wrote a new song and he wants to send it to the singer

Larry

@codechips

 Cody

popupdev04@gmail.com

*I'm in love with the shape of you*

*We push and pull like a magnet do*

*Although my heart is falling too*

*I'm in love with the shape of you*

*oh, I, oh, I, oh, I, oh, I*

*I'm in love with your body*

*oh, I, oh, I, oh, I, oh, I*

*I'm in love with your body*

*oh, I, oh, I, oh, I, oh, I*

*I'm in love with your body*

Total characters: 225

But the lyrics is so long for one sheet and  
needs a lot of paper to be sent seperately

So he replaced the redundant lines  
with characters that take less space

popupdev04@gmail.com

I'm in love with the shape of you -> #

oh, I, oh, I, oh, I, oh, I  
I'm in love with your body } -> &

# We push and pull like a magnet do

Although my heart is falling too # 3&

Total characters : 130

And finally he sealed the entire lyrics  
in one envelop that can be easily  
transported to the singer

This is the same way a zip file works

ZIP is a common file format that's used to **lossless compress** one or more files together into a single location. This **reduces file size** and makes it **easier to transport** or store.

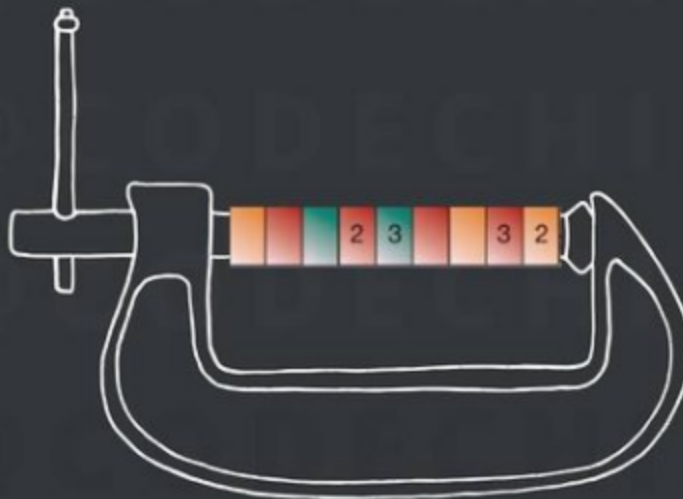

@codechips

 Cody

popupdev04@gmail.com

The files you placed within the ZIP are encoded to eliminate any redundant information to avoid taking up unnecessary space while the files are being stored
